## Introduction

As stewards of the Kapalua Resort we have a responsibility to practice the Hawaiian value of Malama Aina (to care for, protect, and preserve the land). Hawaii is home to some of the most unique flora found in the world many of which can be found only in Hawaii. Our host culture is intertwined with the vegetation present in Hawaii and there are many uses that can be perpetuated today; many plants have a story behind it. Many native Hawaiian plants are rarely seen in populated areas. To maintain the distinctiveness of Hawaii's landscape it is important to promote their use.

Equally important is the protection of the Pu'u Kukui Watershed Preserve, the magnificent backdrop of the Kapalua resort that is home to many rare and endangered species and is the main water source for West Maui. Introduction of invasive species to this area could have irreversible impacts on Maui's fragile ecosystem and water source for generations to come. Maui Land & Pineapple Company, Inc. takes this job very seriously; our vision is based on four cornerstones - two of which directly apply to this policy. **These policy guidelines should be consulted prior to any landscaping project.**

### *Eco-sensitivity*

"We carefully maintain our island's natural beauty, biological diversity and fragile ecosystems. By doing this we are committing to pass on to the next generation an island that will be proud to call home."

### *Authenticity*

"We are true to our place, our unique cultural and architectural history as it has been practiced by those who came before us. We treat our sacred areas with respect and awe."

## How to use this document

This document is designed to streamline the design, review, approval and implementation of the landscape design and maintenance component of the Kapalua resort community in our efforts to create a "sense of place" that is unique and authentic.

- The "approved" and "prohibited" plant lists will be continually updated as new information comes forward with regard to invasive as well as desired plant species.
- The information contained in this policy document should be incorporated into RFP's for consultants used in any development or re-development project.

- The information contained in this policy document should be used to educate our design professionals and nursery vendors in our objective to achieve compliance with our “Voluntary Code of Conduct”.
- The Landscape Architectural professional, as they develop project designs and themes, should consult the “approved” list of species in the development of their specifications and take special heed to the objectives of our overall policy in the creation of their project theme.
- The information contained in this policy should be used as a basis for the preparation of Design Guidelines for all new development projects. Discussion of our objectives and policies should take place in all guideline documents that are produced for either infrastructure landscape work or Homeowner’s Association Design Guideline documents.
- The information contained in this policy will be used in the review and approval process for all landscape planting plans and Design Guideline documents.

## Objectives of Policy

- The use and education of Native Hawaiian plants is to be encouraged.
- Protection and preservation of trees (*aside from the invasives*) are to be encouraged.
- Trees and other landscape plants should be established based on climate, soil conditions, and availability of water, the use of drought tolerant plants should be used whenever and wherever feasible
- Prohibit the use of plants that could become a threat to the Hawaiian environment.
- Incorporate General Provisions of Maui County Planting Plan in designs
- In redevelopment projects, remove invasive species and properly dispose of to prevent propagation in a new location
- To achieve full compliance with our “Voluntary Code of Conduct” policy from our landscape architectural consultants and preferred nursery professionals.
- Encourage the improvement of our guidelines, policies and practices using resources such as interns and scholars.
- Encourage consistency in project covenants to strengthen overall resort image and simplify enforcement.
- Develop policies for the improvement of efficiency in existing irrigation systems, standardize new irrigation installations for ease of maintenance, and develop monitoring systems to track water usage.

## Definitions

There are six basic classifications of plants used in discussion:

Endemic – plants that have occurred naturally (no human interaction) only in Hawaii (eg: Ohia Lehua, Silvers words, Koa)

Indigenous – Plants which are found naturally (no human aid) in Hawaii as well as other places in the world. They have not evolved over time and have stayed the same since introduction to Hawaii many years ago (eg: Hala, Pohinahina)

Polynesian Introduction – The Polynesians brought with them many plants that were used in daily life for medicinal, food, crafts, etc. Typically refers to plants brought to Hawaii prior to European contact in 1778 (eg: Noni, Ulu)

Introduced / Alien – plants that were brought to Hawaii by people, animal, or by accident. A large number of these introductions were brought here for horticultural purposes. A small fraction of these plants have aggressive traits that cause them to significantly disrupt the proper function of the ecosystem and dramatically alter the landscape, they are referred to as Invasive Species.

Invasive Species– These plants should be avoided at all costs. They are alien species that were brought to Hawaii either on purpose or by accident that compete with native plants for resources and habitat. They grow and disperse at a faster rate than the native plants, shading them out, and eventually taking over. This can lead to devastation in our natural forests. Of the approximate 13,000 alien species that have been introduced to Hawaii, only a small percentage (1%) of them demonstrate destructive invasive tendencies. Another 200 – 300 species have been earmarked to potentially cause problems in the future.

## Process

### *Rules*

- Native plants should be incorporated into each project, the native plants should represent a minimum of 20% coverage of the planted area.
- In re-development projects, for every tree that is removed, a new one should be planted in the final development. In all other areas there will be a 20% replacement goal. In the case of removal of invasives, a suitable approved species should be planted.
- Label Hawaii's native plants whenever feasible.
- Plants will be acceptable if on the "Approved" lists.
- Cannot be planted if on the "Prohibited Plants" list - this list to be updated quarterly or as needed. Err on the side of caution; do not plant if it is the same family as "Prohibited Plants" List. As this list is a work in progress and very restrictive, the Landscape advisory board will review individual plants on a case by case basis and update the lists appropriately.
- Plants that are not on either list can be submitted for consideration. If the plants are approved, their names will be added to the "Approved" list for future use.
- Re-development projects must include a plant survey to identify existing plants, plants that are on the "Prohibited Plants" list must be removed and replaced with a suitable alternate.
- Request that your Landscape Architect or Nursery provider sign the Voluntary code of Conduct, please attach signed form to submittal
- All landscape planting plans must be submitted for review by the Landscape Advisory Board.
- All Landscape Design Guideline manuals for infrastructure as well as Homeowner Association Documents must be submitted for review by the Landscape Advisory Board.

Please submit landscape and irrigation plans to the community development department located at 1000 Kapalua Drive, Lahaina, HI 96761 for review prior to installation or county submittal. See Submittal form on page 9.

## *Disposal*

- Proper disposal of plant waste is a must. In 2007, the Maui Agricultural Partners (MAP) composting project will be operational, and all green waste should be delivered to the site where it will be composted. Composting is an effective way to prevent propagation of discarded plant material. Do not dump green waste in valleys or other areas. Invasive species can begin to grow this way, exacerbating the problem. All project specification manuals shall contain provisions requiring contractors to dispose of green waste in an eco-friendly manner. Provide strict requirements for the use of the MAP compost site or other suitable facility.

## *Compost Use*

- In the interest of eco-sensitivity, the use of compost as a natural soil fertilizer is encouraged. In addition to providing macro and micro nutrients and improving soil water retention, a biologically active compost protects plants from disease and pests by inoculating the soil with beneficial organisms. Soil is one of our most important natural resources, and building it's health through compost and other natural amendments will result in a multitude of environmental benefits in the long range. Reducing the use of synthetic fertilizers and pesticides will have an immediate positive effect on our environment in terms of water, soil and air quality, and indirectly improves human health and reduces reliance on fossil fuels.
- Compost will be available for bulk purchase at the MAP compost operation located behind the Honolua Plantation Office. All project specification manuals shall contain provisions requiring contractors to utilize compost to the extent as specified by the design professional and minimize the use of synthetic fertilizers, opting for the use of natural pesticide products and providing strict requirements for the use of MAP compost or other suitable amendments.

# **Kapalua Resort Landscape Project Submittal Forms**

Please submit to:

Maui Land and Pineapple Company, Inc  
Community Development Division  
1000 Kapalua Drive  
Lahaina, HI 96761

Phone: 808-669-5625

**Kapalua Resort Landscape Advisory Board Plan Review Form**

Please attach the following items:

- Landscape and Irrigation Plans on 11 x 17 (all plans must be dated)
- Landscape Plant list in digital format on Excel. Columns to be as follows:

Common Name	Scientific Name	Qty	Size / Height	Caliper
-------------	-----------------	-----	---------------	---------

Name of Project: \_\_\_\_\_

Contact Person: \_\_\_\_\_ Phone: \_\_\_\_\_

Landscape Architect: \_\_\_\_\_

Date of Submittal: \_\_\_\_\_

Target Landscape Installation: \_\_\_\_\_ QTR \_\_\_\_\_ YEAR

**Plan Requirements:**

- Botanical Names
- Common Name
- Plant Count
- Plant Size
- % of Native Plants used
- Irrigation Details (specify type)
- For Redevelopment projects, attach existing plant inventory and identify invasive plants that will be replaced and disposal method

**Reviewer Comments:**

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Plan Approval Date: \_\_\_\_\_

Authorized Signature: \_\_\_\_\_  
(Print Name and Title Here)

## Voluntary Codes of Conduct for Landscape Architects

1. Seek out education and information on invasive species issues:
  - a. Work with local plant ecologist, horticulturists, nurseries, botanic gardens, conservation organizations and others to determine what species either are currently highly invasive or show aggressive potential. Investigate species under consideration that may present a threat.
  - b. Increase interaction with other professionals and non-professionals to identify alternative plant material and other solutions to problems caused by harmful invasive plants.
  - c. Take advantage of continuing education opportunities to learn more about invasive species issues
2. Identify and specify non-invasive species that are suitable aesthetic and horticultural alternatives to invasive species
3. Eliminate specification of species that are invasive in Hawaii
4. Be aware of potential environmental impacts beyond the designed and managed area of the landscaped plan (e.g. plants may spread to adjacent natural area or cropland)
5. Encourage nurseries and other suppliers to provide landscape contractors and the public with plants that are non-invasive and free from invasive fauna (eg. the coqui frog)
6. Collaborate with other local experts and agencies in the development and revision of local landscape ordinances. Promote inclusion of invasive species issues in these ordinances
7. Maximizing sustainable landscape design elements that reduce the use of fertilizers, pesticides, maintenance, and water resources.
8. Encourage landscape contractors to use compost and other natural soil amendments and pest treatments wherever possible.

\*Adapted from The Nature Conservancy

---

I AGREE

### *Voluntary Codes of Conduct for Nursery Professionals*

1. Seek out education and information on invasive species issues and native Hawaiian plants
2. Ensure that invasive potential of both flora and fauna is assessed prior to introducing and marketing plant species new to Hawaii. Coordinate with such organizations as WRA and HEAR to evaluate any plant in question
3. Identify plants that could be suitable alternatives to the invasive species with an emphasis on native Hawaiian plants
4. Develop and promote alternative plant material through plant selection and breeding
5. Where agreement has been reached among nursery associations, government, academia and ecology and conservation organizations, phase-out existing stocks of those invasive species
6. Follow all laws on importation and quarantine of plant materials into Hawaii
7. Encourage customers to use, and garden writers to promote, non-invasive plants and promote the use of Native Hawaiian plants
8. Do not collect native Hawaiian plants illegally from Native forests, educate customers on why this is detrimental to the survival of the forests

\*Adapted from The Nature Conservancy

I AGREE

## ***Design Guideline Template***

The attached pages show a clear manner in which to describe our preferred trees, shrubs, ground covers etc.

Showcased in this way, the homeowner is given a chance to understand the beauty of the recommended plants. This helps them visualize the design they would like to achieve for their landscape. At the same time, it helps the design professional by giving them a tool to use with their client to expedite the decision making process during preliminary design.

Using the prescribed format, we will create a resource library for use by all project managers creating consistency in our documentation and expediting the process of developing rigorous guidelines.

As each new development is completed, the photo and description pages are to be uploaded on the shared web site for use with ensuing projects. As this library is expanded, new development documentation will become easier. Upload all completed plant specification pages to [www.needsitenamehere.com](http://www.needsitenamehere.com)

## Street Trees

### KOA (*Acacia Koa*)

Growing information:

Zone: 1, 2, 4

Plant type: Tree

Family: Fabaceae

Native Range: Endemic

Height: 60 feet

Spread: 80 feet

Bloom time: N/A

Bloom color: N/A

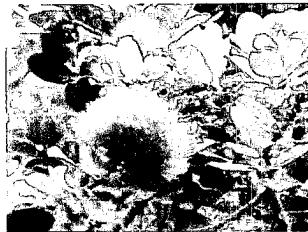

Sun:  Part shade to full sun

Water:  medium wet

Maintenance: medium

**Comments:** A very large tree of the low to mid elevation forests which display an attractive spreading canopy of crescent shaped leaf phyllodes. Koa is very easily propagate and grows rapidly. It is now found on ridge tops and slopes above 1000' between Honolulu and Honokahua, though its former range was probably more extensive. Koa would probably be well suited for acres of Kapalua subject to the greatest rainfall and coolest temperatures. Moderate irrigation, however would ensure its viability just about anywhere except for coastal locations.

## Street Trees

### 'Ohia Lehua (*Metrosideros polymorpha*)

Growing information:

Zone: 1, 2, 4

Plant Type: Tree

Family: Myrtaceae

Range: Endemic

Height: 25 feet

Spread: 25 feet

Bloom Time: Winter - Summer

Bloom color: red, orange, yellow

Sun:  part shade to full sun

Water:  (dry) medium wet

Maintenance: low

**Comments:** Of all Hawaiian plants, 'Ohia probably displays the most variation in growth habit and habitat. Found in moist climate and elevational zones, it produces predominately red blossoms that are very attractive. There are three fine specimens on the grounds of the Kapalua Bay Hotel. Suitable primarily as a featured ornamental, it has its limitations in that it is very slow growing, somewhat difficult to propagate from seed and requires very regular irrigation

## Street Trees

### 'Ohi'a 'ai (*Syzygium malaccense*)

Growing information:

Common Name: Mountain Apple

Zone: 1, 4

Plant Type: Tree

Family: Myrtaceae

Native Range: Polynesian Introduction

Height: 35 feet

Spread: 25 feet

Bloom Time: Spring - Fall

Bloom color: Fuchsia

Sun:  full sun

Water:  Medium wet

Maintenance: medium

**Comments:** This plant was an early Polynesian introduction, during May – June the otherwise green trees will burst into magnificent color as the blossoms appear. They commonly grow in mid-elevation rain forest areas, often as large under story trees; they do not succeed as well at sea level. Trees usually require little care other than year-round water. Flowering usually occurs in early summer followed by fruit ripening 3 months later. The best form of propagation is via budding, air-layering, and cuttings.

## Shrubs

### 'A'ali'i (*Dodonaea viscosa*)

Growing information:

Zone: 2, 3, 4, 5

Plant Type: Shrub to Tree

Family: Sapindaceae

Native Range: Endemic

Height: 6 ft

Spread: 8 ft

Bloom Time: n/a

Bloom Color: light pink

Sun:  part shade to full sun

Water:  dry to medium wet

Maintenance: low

**Comments:** A shrub / small tree suited to dry and sunny locations. 'A'ali'i has no conspicuous flowers, but is rather leafy, responds well to pruning, and would be suitable for an attractive hedge in open areas or on gentle slopes for erosion control. Propagates readily from seeds, and once established would probably not require irrigation beyond the ambient rainfall of Kapalua.

## Plant List Key:

### Zones

The Maui County Planting Plan and the Department of Water Supply have compiled a system of 5 zones of plant growth for Maui County.

<b>Zone Number</b>	<b>Zone Description</b>
<b>Zone 1</b>	Wet areas on the windward side of the island. More than 40 inches of rain per year. Higher than 3,000 feet.
<b>Zone 2</b>	Cool, dry areas in higher elevations (above 1,000 feet). 20 to 40 inches of rain per year.
<b>Zone 3</b>	Low, drier areas, warm to hot. Less than 20 inches of rain per year. Sea level to 1,000 feet.
<b>Zone 4</b>	Lower elevations which are wetter due to proximity of mountains. 1,000 to 3,000 feet.
<b>Zone 5</b>	Salt spray zones in coastal areas on the windward side.

\*Kapalua Resort Community resides primarily in Zone 4

# **APPENDIX**

# Suggested Plant Lists by Project

The following pages are a list of suggested plants for each community development project. Plants were suggested by Ernie Rezens, certified arborist and Anna Palomino, Native Hawaiian Plant Specialist and Owner of Ho‘olawa Farms in Haiku, Maui. These lists are not inclusive and are only suggestions based on style of development and climate zone.

Plant lists by project in order of appearance include the following:

1. Coastal Trail
2. Central Resort
3. PELOA
4. Mahana Estates
5. Kapalua Mauka Entrance
6. Kapalua Mauka
7. Mauka Village
8. Mauka Course
9. Kapalua Bay
10. Pulelehua
11. Fruit Trees

Area	Elevation (ft)	Rainfall (in/yr)	Uses
Coastal Trails	0-50	35	Trail System

Botanical Name	Common Name / Hawn. Name	Matured Ht.	Matured Spread	Growth Rate	Wind Tol	Salt Tol	Flw Color	Flw Aroma	Water Req	Plant Type

Theobroma cacao	tamarind	20	15	slow	med	mod	inconspic	no		(D) med-wet	small tree

**WRA is Weed Risk Assessment.**

\*This is a suggested list only and is not inclusive. All plants on this list have been compared with the Kapalua Resort Prohibited Plants List and are in compliance.

## **Explanation of Symbols Used in Tree List for MLP Company.**

June 23, 2006

### **1. Growth Rate:**

Slow, Medium, Fast. Denotes rapidity of growth. Depends on plant's environmental conditions and maturity.

### **2. Wind Tolerance:**

- a. Poor: Does not grow well without protection from strong winds.
- b. Medium: Tolerant of wind. Some wind training may be evident if not protected.
- c. Good: Tolerant of wind. Protection from wind at planting will help tree to become established faster.

### **3. Salt Tolerance:**

- a. Sensitive: Sensitive to salt spray. Plant far from ocean.
- b. Moderate: Needs protection from salt spray. Plant behind hedges and buildings when along coastal areas.
- c. Tolerant: Tolerant of salt spray. This may vary from plant to plant.

### **4. Flower Color:** A description of flower color. Inconspicuous is used for small flowers that are not easily seen.

### **5. Aroma:** If the flower has a distinctive pleasant odor.

**6. Water Requirements:** Plants need the amount of rainfall indicated. When they are grown in areas providing less than their required rainfall, supplemental irrigation will be necessary. For plant species where this is possible, the designated water requirement is extended to a drier category and is indicated within parentheses, e.g., (dry) med-wet. A med-wet plant can be grown in a dry environment providing water is applied.

- a. Dry: Less than 20 inches of rain per year. Plants will need more than 20 inches of rain per year until they become well established. Matured plantings with this characteristic will tolerate this low rainfall.
- b. Med: 20-40 inches of rain per year.
- c. Wet: More than 40 inches of rain per year.

# Approved Plant List

This list is a suggestive list and is not inclusive. The main focus is avoid use of plants that are listed on the Prohibited list. The plants listed on the Approved list have been pre-approved, any plants not on either list will be reviewed by the Landscape Advisory Board, if approved will be added to the appropriate list for use in the future.

## Components of the “Approved” List

- Endemic, Indigenous, and Polynesian introduced plants
- Weed Risk Assessment (WRA) Designation of L -not currently recognized as invasive in Hawaii and not likely to have major ecological or economic impacts on other pacific islands based on the HP-WRA screening process
- WRA designation of L (Hawaii) - not currently recognized as invasive in Hawaii based on a track record of not becoming naturalized despite being widely planted in Hawaii for at least 40 years
- Hawaii Ecosystems at Risk (H.E.A.R) – Alternatives to invasives identified on the Maui County Planting Plan

# Prohibited Plant List

We have created a compilation of the various invasive weed lists in Hawaii and worldwide to create the “Prohibited” Plant list. This list identifies plants that are prohibited or have restrictions on where they can be planted throughout Kapalua. In re-development projects, plants listed on the Prohibited list should be evaluated for appropriateness and then properly removed and composted being replaced with a suitable non-invasive alternate. As this list tends to lean on the restrictive side, the Landscape Advisory Board will review all plants and may choose to move some plants from the Prohibited list to the Approved list. This list is a working document and will be updated quarterly or as needed.

## Components of the “Prohibited” List

- Internally not approved for planting in the Kapalua Resort
- Maui Invasive Species Committee
- H.E.A.R identified as Invasive
- County of Maui Water Supply Listed Plants TO AVOID
- Pest Plants of Hawaiian Native Ecosystems – University of Hawaii Botany Department
- DLNR / DOFAW Hawaii's Most Invasive Horticultural Plants
- USDA State of Hawaii Noxious Weed List
- Federal Noxious Weed List – Hawaii
- List of Plant Species designated as noxious weeds for eradication by Hawaii Dept of Ag
- WRA designation of H (Hawaii) – documented to cause significant ecological or economic harm in Hawaii as determined from published information on the species current impacts in Hawaii
- WRA designation of H (HPWRA) likely to be invasive in Hawaii and on other Pacific islands as determined by the HP-WRA screening process, which is based on published sources describing species biology and behavior in Hawaii and / or other parts of the world

Verbenaceae	<i>Stachytarpheta Dichotoma</i>			
Verbenaceae	<i>Stachytarpheta Urticaefolia</i>			
	<i>Stachytarpheta Urticifolia</i>	Verbenaceae		

Current as of July 4, 2007

This list is a compilation of various invasive weed lists in Hawaii and worldwide. For any plants in question, please submit request to the Landscape Advisory Board for Review.

Maui Land and Pineapple Company, Inc  
Kapalua Landscaping Policy  
Prohibited Plants List

Family	Preferred Species Name	Common Name	Notes	LAB Decision Date
Asclepiadaceae	Stapelia Gigantea	Carrion Flower, Starfish Flower, Zulu-Giant, Giant		
Fabaceae	Stenolobium Brachycarpum			
Acanthaceae	Stephanophysum Longifolium			
	Stiga Lour	Witchweed		
Poaceae	Stipa Cernua			
	Stipa Trichotoma Nees	Nasella Tussock		
Fabaceae	Stylosanthes Guianensis	Stylo		
Fabaceae	Stylosanthes Scabra	Shrubby Stylo	weedy genus	
Meliaceae	Swietenia Macrophylla	Large-Leaf Mahogany	INVASIVE TREE	
Meliaceae	Swietenia Mahagoni	West Indian Mahogany		
Myrtaceae	Syncarpia Glomulifera			
Myrtaceae	Syncarpia Laurifolia			
Araceae	Syngonium Podophyllum	Arrowhead Plant		
Myrtaceae	Syzygium Cumini	Java Plum, Jambolan Plum		
Myrtaceae	Syzygium Floribundum			
Myrtaceae	Syzygium Jambois			
Bignoniaceae	Tabebuia Heterophylla	Pink Trumpet-Tree	Invasive tree	
Bignoniaceae	Tabebuia Pentaphylla	Mayflower		
Asteraceae	Tagetes Minuta	Stinkweed, Marigold		
Tamaricaceae	Tamarix	?,		
Tamaricaceae	Tamarix Aphylla	Athel Tamarisk		
Tamaricaceae	Tamarix Gallica	Saltcedar		
Bignoniaceae	Tecoma Capensis	Cape Honeysuckle		
Bignoniaceae	Tecoma Stans	Yellow Bells		
Fabaceae	Tephrosia Candida	White Tephrosia		
Fabaceae	Tephrosia Purpurea	Pila		
Combretaceae	Terminalia Catappa	Tropical Almond		
Melastomataceae	Tetrazygia Bicolor	Florida Clover Ash		
Lamiaceae	Teucrium Inflatum			
Lamiaceae	Teucrium Vesicarium			
	Themeda Villosa A. Camus	Lyon'S Grass
